# Energy

"Energy"

We don't get it when we rest; we get it from food,

If you're a cow and we eat you, we get it from you.

Cannibals get it from eating dudes,

Cows get it from eating the grass that they chew.

Grass and plants get it from sun's rays,

Using photosynthesis, work even on Sundays.

Light hits carbon dioxide in the plant,

Makes carbohydrates and some oxygen.

You can't destroy it, but you can move it,

You can't create it, but you can use it.

You want your car to move? Burn some fossil fuels,

But just know that oil's something we cannot renew.

But solar panels, windmills, hydroelectric dams,

All give us energy again and again.

We can even get energy stored in the Earth,

It's \_\_\_\_\_ heat from the core of the Earth.

It's that uh-tigga-uh, it's the energy.

Ooh, it's inside me.

Can you feel it? You feel it? It's the energy.

It's letting us move whenever we step in the room.

\_\_\_\_\_ 's all about that movement,

So it's what happens when you're moving.

Energy that's \_\_\_\_\_ is stored, ready to get you,

Like a bow and arrow pulled back, or skiers when the snow's packed.

They're at the top of the mountain,

"Look at 'em up there, I think I see some potential in 'em."

\_\_\_\_\_ 's when they go, when the ball gets thrown,

Or you run real quick to get home.

\_\_\_\_\_ energy's from those chemical bonds,

In the food we consume, and in the wood that we burn.

There's chemical energy in the calories in tea,

From tea leaves soaking up \_\_\_\_\_ energy.

But hot tea has more energy than cold tea,

Yep, you guessed it: heat's a form of energy.

They call it \_\_\_\_\_, like your thermal coat in the winter,

Which you need to keep your heat energy near ya.

\_\_\_\_\_ energy is what makes the speakers shake,

And vibrate, and Stevie Wonder thinks it's great.

You want light energy? Just set your microwave clock,

It's the light waves that make your popcorn go POP!

\_\_\_\_\_ flow, that's electrical, they don't rest,

Flow "Through the Wire" like Kanye West.

\_\_\_\_\_ 's fission or fusion,

Fission's splitting atoms apart, fusion is fusin' 'em .

It's that uh-tigga-uh, it's the energy.

Ooh, it's inside me.

Can you feel it? You feel it? It's the energy.

It's letting us move whenever we step in the room.
