

# Human Body Systems

*"Keep You Alive"*

*Whatever you're doing, wherever, whenever,  
\_\_\_\_\_ working together.*

*24/7, 365,*

*Your body systems keep you alive.*

It's life or death, that's one way to say this,

Unless your body maintains its \_\_\_\_\_,

Or inner balance, yeah, so out of sight,

12 body systems and they keep you alive.

Let's start with the one that carries your \_\_\_\_\_,

The \_\_\_\_\_ system if you know what's up.

The circulatory's three main parts

Are the blood, \_\_\_\_\_ and \_\_\_\_\_.

Now, we got the \_\_\_\_\_.

It helps you to breathe, here's an extra story:

It brings oxygen to your \_\_\_\_\_ from the air,

And removes all the \_\_\_\_\_ that's in there.

Next, the \_\_\_\_\_ — true,

That's the system that breaks down all your food

Into \_\_\_\_\_ that your cells need

To grow, to heal and for their energy.

As you eat, savor the taste,

The digestive helps your body get rid of the \_\_\_\_\_.

Hey — no need to be \_\_\_\_\_,

But the nervous system is next and it's purpose,

Is kinda like an information highway,

Sending messages from Monday to Friday.

Weekends, too! What does it contain?

Your \_\_\_\_\_, yeah, your \_\_\_\_\_ and your \_\_\_\_\_.

Whatever you're doing, wherever, whenever,

12 systems working together.

24/7, 365,

Your body systems keep you alive. x2

Moving on with our mission,

Yeah, it's the \_\_\_\_\_ system.

It works with the skeletal to help you move,

So \_\_\_\_\_ and \_\_\_\_\_, that's what muscles do.

The \_\_\_\_\_ system gives you support and

Helps you move and protects your organs.

Now, what keeps your functions normal?

The \_\_\_\_\_, it's all \_\_\_\_\_ and \_\_\_\_\_.

They help indicate hunger, and that's

Why I stack pancakes like a lumberjack.

It's really quite critical, but up next,

The \_\_\_\_\_ system is in effect.

It gets rid of \_\_\_\_\_, thank your \_\_\_\_\_,

Or not — when you need to use a toilet quickly.

What's on the outside? Are you getting me?

\_\_\_\_\_, \_\_\_\_\_ and \_\_\_\_\_ are the \_\_\_\_\_

System, but here's the twist:

Without that system you'd look like this.

And your \_\_\_\_\_ system defends

Against disease and \_\_\_\_\_.

\_\_\_\_\_ break 'em down

Or make \_\_\_\_\_ for next time they come around.

Your immune system works with the \_\_\_\_\_,

Which makes and moves \_\_\_\_\_, and that is

Where the white blood cells live.

The last system is the \_\_\_\_\_.

Gents and ladies, that's how we make babies,

With \_\_\_\_\_ and \_\_\_\_\_, heard of 'em, maybe?

12 systems — yeah it's crazy,

Like programs interacting on the daily.

And even when you sleep like a baby,

Body systems work hard, they're not lazy.

Whatever you're doing, wherever, whenever,

12 systems working together.

24/7, 365,

Your body systems keep you alive. x2

*Ay yo, I need my circulatory, nervous, respiratory, digestive, lymphatic, excretory. I mean, I also need my muscular, immune, skeletal, endocrine, integumentary and reproductive, on the floor! Yeah, that's them, the body systems, of your body, within the system.*
